

Deterministic HTTP boundaries for offline validation

LOCAL EVIDENCE / REMOTE CI NOT YET RUN

Report ID 20261001-212417-deterministic-http-fixtures
Prepared UTC 2026-10-01 21:24:17
Author / role Bijan Mousavi
Parent commit: 08149682754bfcd9530e1875f7e90c9e86dc95af
Candidate SHA-256: f66fc879dc46e25c52d0347c0e1ee1d83327b4991ecb59321c72e69035d8991a
Fingerprint excludes only this report's JSON/TEX/PDF; it is not the final commit SHA.

WHY / problem and value

Build-time, server and browser requests need lawful bounded data and must not fall back to remote services during ordinary validation.

WHAT / change scope

Add synthetic source-derived records, a loopback HTTP service, explicit Node/browser egress guards and isolated adapter build wrappers with a built Node runtime probe.

HOW / implementation rationale

Five actual HTTP/Chromium tests cover response cases and undeclared destinations. Both original adapter commands build against separate services; the real built endpoint queries fixture APIs. Test telemetry is explicitly disabled.

WHERE / affected paths

tests/fixtures/
scripts/verification/fixture-build.mjs; fixture-runtime.mjs
scripts/verification/admission.py
package.json; package-lock.json

PRESERVED / existing contracts

Application source, public defaults, existing commands, routes, assets, viewer and deployment interfaces retain their original bytes. Playwright is exact-pinned development tooling; unrelated locked packages remain intact.

RISK / what could go wrong

Synthetic consumer shapes do not establish live API compatibility. Node interception is test wiring, not an operating-system sandbox. Inherited dependency advisories remain unresolved.

LIMITATIONS / what is not proved

95 tests pass; Node and Netlify compile offline. Built Study and dynamic Image return synthetic titles. Browser boundary probes establish egress handling, not full UI journeys, real viewer decoding or hosted Netlify behavior. Telemetry-blocked failure evidence is retained.

ROLLBACK / restore and verify

Revert fixture tools, admission wiring and browser development dependency together in a reported commit; retain earlier reports and failed run evidence.

VALIDATION / actual local evidence

Gate	Command / check	Outcome	Duration	Evidence
Toolchain	npm run doctor	PASS	0.46 s	artifacts/admission/20261001-212417-deterministic-http-fixtures/results.json
Developer tests	npm test	PASS	1.74 s	artifacts/admission/20261001-212417-deterministic-http-fixtures/results.json
Report tools	npm run report-test	PASS	6.31 s	artifacts/admission/20261001-212417-deterministic-http-fixtures/results.json
Staged con-trols	npm run verification-test	PASS	7.62 s	artifacts/admission/20261001-212417-deterministic-http-fixtures/results.json
Index hygiene	git diff --cached --check	PASS	0.02 s	artifacts/admission/20261001-212417-deterministic-http-fixtures/results.json
Application	npm run setup; npm run fixture-test; isolated npm run fixture-build -- node netlify	PASS	40.09 s	artifacts/admission/20261001-212417-deterministic-http-fixtures/results.json

Remote validation at authoring: NOT_RUN. Later CI belongs to the immutable commit's check records, not a follow-up report commit.
