

Retained reports and exact generated integration nodes

LOCAL EVIDENCE / REMOTE CI NOT YET RUN

Report ID 20261001-213951-retained-report-integration
Prepared UTC 2026-10-01 21:39:51
Author / role Bijan Mousavi
Parent commit: faacc53c68df080eaae92ded981d8fdb6a02f4fd
Candidate SHA-256: 688e5069af9827b54939380a3a322bd1d37025cb17e62f81d08f0dc38f9523dd
Fingerprint excludes only this report's JSON/TEX/PDF; it is not the final commit SHA.

WHY / problem and value

Parent-bound report evidence must survive fork PR merges without silently admitting unreported merge changes.

WHAT / change scope

Add original-tree report/history reproduction and a narrow GitHub integration validator for checked parents, PR provenance, expected merge trees and live Actions identities.

HOW / implementation rationale

Reject wrong parents, missing or stale reports, unreported merge changes, conflicting trees, foreign PRs and failed/pending/skipped checks. Reproduce historical reports with each original renderer.

WHERE / affected paths

scripts/reports/history.py; integration.py
tests/reports/test_history.py; test_integration.py
docs/engineering/integration.md
reports/README.md

PRESERVED / existing contracts

Original authored commits, parent/payload bindings and archived triplet bytes remain intact. Generated merge nodes get external check/provenance evidence; authored resolutions still require normal reports.

RISK / what could go wrong

Historical contributor tools/TeX must run in disposable secret-free environments. Local check indexes are not trusted as live outcomes; the integration CLI queries Actions and downloads checkout identities.

LIMITATIONS / what is not proved

105 tooling tests pass. All nine prior reports reproduce byte-identically with their original tools in this environment. Synthetic merge probes are unit controls, not actual GitHub merges or approval. Bootstrap workflow execution and first permanent merge remain pending.

ROLLBACK / restore and verify

Revert integration tools and documentation together in a reported commit. Retain authored evidence and require a verified replacement protocol before further merge operations.

VALIDATION / actual local evidence

Gate	Command / check	Outcome	Duration	Evidence
Toolchain	npm run doctor	PASS	0.40 s	artifacts/admission/20261001-213951-retained-report-integration/results.json
Developer tests	npm test	PASS	1.79 s	artifacts/admission/20261001-213951-retained-report-integration/results.json
Report tools	npm run report-test	PASS	10.41 s	artifacts/admission/20261001-213951-retained-report-integration/results.json
Staged controls	con- npm run verification-test	PASS	6.82 s	artifacts/admission/20261001-213951-retained-report-integration/results.json
Index hygiene	git diff --cached --check	PASS	0.01 s	artifacts/admission/20261001-213951-retained-report-integration/results.json

Remote validation at authoring: NOT_RUN. Later CI belongs to the immutable commit's check records, not a follow-up report commit.
