

UTC report identities and preserved archives

LOCAL EVIDENCE / REMOTE CI NOT YET RUN

Report ID 20261001-205129-utc-report-archives

Prepared UTC 2026-10-01 20:51:29

Author / role Bijan Mousavi

Parent commit: 1e5066a6cec226ed871093684629312ebfcc4bbb

Candidate SHA-256: aaf9adda78d4655d379c2ea381fdb31449dc24b0f38cd3210a8ab933df5c0759

Fingerprint excludes only this report's JSON/TEX/PDF; it is not the final commit SHA.

WHY / problem and value

Sort engineering evidence by actual UTC preparation time without changing the identities or bytes of historical reports.

WHAT / change scope

Require timestamped report IDs, calendar and preparation agreement. Rename three existing triplets and add explicit validated legacy lookup.

HOW / implementation rationale

Bind new IDs to preparation UTC. Preserve archive bytes and original trailers; verify their hashes, original trees and parent-bound fingerprints. A corrected wrong-commit test retains its failed run.

WHERE / affected paths

scripts/reports/
tests/reports/
reports/templates/
reports/legacy-archive.json
reports/commits/
reports/README.md; docs/engineering/team-review.md

PRESERVED / existing contracts

All nine legacy artifacts retain original bytes, records, preparation times and trailers. Application, dependencies, adapters, deployment and existing CI inputs are unchanged.

RISK / what could go wrong

Historical records require original tools for reproduction. Archive lookup depends on available original ancestry. It cannot authorize a new legacy-ID candidate.

LIMITATIONS / what is not proved

57 report tests passed on the exported index. No application behavior, viewer decoding, remote CI or deployment claim. Prior known audit advisories remain.

ROLLBACK / restore and verify

Revert this coherent change with a new report. Restore original archive paths and tools together; retain authored historical commits and their evidence.

VALIDATION / actual local evidence

Gate	Command / check	Outcome	Duration	Evidence
Report tools	python3 -B -m unittest discover -s tests/reports -v	PASS	5.17 s	artifacts/admission/report-archive-calendar/report-tests.json
Preservation	git diff --cached --exit-code HEAD -- src public package.json package-lock.json astro.config.mjs netlify.toml tsconfig.json Dockerfile helm-chart .github .dockerignore	PASS	0.01 s	artifacts/admission/report-archive-calendar/preservation.json

Remote validation at authoring: NOT_RUN. Later CI belongs to the immutable commit's check records, not a follow-up report commit.
