

Traceable engineering change reports

LOCAL EVIDENCE / REMOTE CI NOT YET RUN

Prepared UTC 2026-10-01 19:38:13

Author / role Bijan Mousavi

Parent commit: 808857d90a142ab0dc10c873ec44a2e24a344a76

Candidate SHA-256: 64794a1fa3b57c97fb042b6a76851de7d5dcb3ef395ce37d09104a3a047ac8d3

Fingerprint excludes only this report's JSON/TEX/PDF; it is not the final commit SHA.

WHY / problem and value

Make fork proposals easy to review through evidence tied to each authored change, while preserving upstream ownership and application behavior.

WHAT / change scope

Add fork contributor guidance, JSON validation, staged-payload fingerprints, escaped one-page PDF generation, report templates and focused regression tests.

HOW / implementation rationale

Separate payload identity, validation and rendering. Test the exported staged payload, bind the record to its actual parent, and render escaped change descriptions into a readable one-page PDF.

WHERE / affected paths

scripts/reports/
tests/reports/
reports/templates/
reports/README.md
README.md; CONTRIBUTING.md
.gitignore

PRESERVED / existing contracts

All application source, public assets, dependencies, Node/Netlify configuration, chart interfaces and existing CI are byte-identical to the parent.

RISK / what could go wrong

Reports are fork-local evidence. Structure alone cannot prove claims. The inherited Docker context still includes developer files. No deployment change is included.

LIMITATIONS / what is not proved

No remote CI, browser interaction or viewer decoding claim. Baseline npm audit reports 41 advisories, including two critical. No repository license declared. TeX Live 2024; Poppler 26.09.0.

ROLLBACK / restore and verify

Revert this coherent change with a new reported commit. Recheck application inputs against the parent and rerun relevant checks.

VALIDATION / actual local evidence

Gate	Command / check	Outcome	Duration	Evidence
Report tests	python3 -B -m unittest discover -s tests/reports -v	PASS	5.05 s	artifacts/admission/public-report/report-tests.log
Preservation	git diff --cached --exit-code 'HEAD^' -- src public 'package*.json' '*.*mjs' '*.*toml' tsconfig.json Dockerfile helm-chart .github .dockerignore .vscode	PASS	0.01 s	artifacts/admission/public-report/preservation.log

Remote validation at authoring: NOT_RUN. Later CI belongs to the immutable commit's check records, not a follow-up report commit.
